

# Outbound Single Sign On Connections

## Overview

athenahealth offers clients the ability to connect seamlessly into a third party system using their athenaNet credentials. The connection is made through SAML 2.0 assertion messages via our federation server, PingFederate. athena acts as the Identity Provider and the third party system is the Service Provider.

## Partner Requirements

In order to setup an Outbound SSO connection from athena the partner must have the following in place.

- **SAML 2.0 Protocol:** Partner must have or implement an identity federation server that supports SAML 2.0 protocol.
- **Signing Algorithm:** athena's PingFederate SAML assertions support SHA256 signing algorithm. Partner's federation server must support SHA256.
- **User Mapping:** Partner is required to maintain the athenaNet username mappings to the usernames in the third party system.
- **SSO Worksheet:** Partner needs to fill out the required SSO Worksheet in order for athena to setup the Outbound Single Sign On connection.

Single sign-on (SSO) enables a user to log into one system and gain access to another without being prompted to log in again. athena acts as the Identity Provider (IdP), or the system that the user originally logs in to, which grants access to the other system by passing the user's identity. The system being accessed is called the Service Provider (SP).

## SSO Initiation Workflow

1. Client initiates request for Outbound SSO connection through their account manager.
2. Completed SSO Worksheet is returned to athena.
3. athena creates SSO connection within PingFederate and configures athenaNet SSO link.
4. Third party system completes username mappings.
5. athena and third party system test SSO functionality.

# Outbound Single Sign On Connections

## Additional Information

- **Available attributes to be sent in SAML Assertion:**

- athenaNet username
- athena ContextID
- athena DepartmentID
- user's email address
- user's full name
- user's first name last
- user's last name
- athena PatientID
- user's type
- user's position

- **Integration Options:**

The single sign on connection can be initiated from different areas within athena.
